- Call for quantity pricing and custom imprinting prices.
- Minimum shipping and handling fee \$5.
- Please add \$1 for each additional piece.

The DiskOnKey utilizes a standard Universal Serial Bus (USB) port for complete and instantaneous plug-n-play interoperability on the latest Windows®, Mac® OS and Linux® operating systems - without requiring users to load software drivers. When plugged into an USB port, the DiskOnKey operates as a secure, reliable, removable hard drive. The DiskOnKey lends itself to a wide variety of innovative uses. This product is an active device with its own central processing unit (CPU) and is capable of supporting and running multiple applications directly from the product. When using DiskOnKey you can save documents, presentations, cross the boundaries between a PC & Macintosh, and save downloaded music, videos or books. Because it connects with host computers through a USB port, the DiskOnKey is easily utilized. Just plug it in! The host computer will immediately detect and recognize it as a supplementary hard drive.
